FABIAN MASSOTTO

SOFTWARE ENGINEER

PROFILE

I am naturally curious and passionate about technology and innovation, devoted to keep learning every day. I love working in fast-paced and dynamic environments, with different cultures and backgrounds, where collaboration is key to success. A problem solver at heart, I approach challenging scenarios with a creative mindset and enjoy finding solutions.

SKILLS

- Web Development
- DevOps
- Cloud
- Artificial Intelligence
- Automation
- JavaScript
- TypeScript
- React.js

- Python
- Django
- Azure
- Terraform
- GitHub
- Docker
- Backstage
- Storybook

EDUCATION & CERTIFICATIONS

University of Buenos Aires
Master's degree, Artificial Intelligence — Mar 2024 - Present

Universidad Tecnológica Nacional
Engineer's degree, Electronics — Mar 2014 - Dec 2019

Harvard University
- CS50's: Artificial Intelligence — Jul - Nov 2023
- CS50's: Web Development — Jan - Apr 2023

Software certifications
- Azure AI Engineer Associate — May 2024
- GitHub foundations — Feb 2024
- Azure AI fundamentals — Aug 2023
- Azure Developer Associate — Jun 2023

CAREER SUMMARY

ExxonMobil
Software Engineer
Jul 2020 - Present
Specialized in design and development of cloud-based web applications, my daily responsibilities involve every aspect of the web development lifecycle, including frontend and backend coding, CI/CD pipelines, infrastructure as code, and testing.

Over the past years, I have worked with various cross-functional teams, providing guidance on web development best practices, diagnosing application performance issues, and identifying opportunities to enhance the developer experience across the organization.

Key experiences include:

- Development and support of the ExxonMobil's Design System using Storybook, ensuring a consistent and efficient UI/UX across all applications.

- Currently leading the development of an Internal Developer Portal, leveraging open-source Backstage framework, to streamline development processes and boost productivity for engineering teams.

Ernst & Young
Software Engineer
Jun 2019 - Jul 2020
As a member of the Computer Forensics team, my main responsibilities involved engineering ETL pipelines to transform digital evidence into structured formats, making data accessible and actionable for auditors and fraud investigators.
